

Red Kite

Figure 1: Red Kite chick in Perthshire in 2019 (Photo: Chris Baker, Tayside & Fife RSG).

Red Kite is monitored widely across Scotland by SRMS data contributors.

Red Kite has also been subject to national survey via The Statutory Conservation Agency/RSPB Annual Breeding Bird Scheme (SCARABBS) programme. There has been just one survey in 2000 (Wotton *et al.* 2000) and this estimated a population of 40 pairs 'in Scotland', although numbers have increased considerably since, aided by the release of birds elsewhere in Scotland (North Scotland, Dumfries & Galloway, Central Scotland and Aberdeen). Red Kite is no longer on the SCARABBS list due to huge increases in England and Wales.

Our latest analysis of SRMS Red Kite data for the period 2009-2018 has produced no national trends in breeding number or productivity, but has

produced trends for five of the eight SRMS regions (Table 1) and for six of the 13 NHZ regions (Table 2).

Users of the published trends should be aware that Red Kite received comprehensive monitoring up to the last few years of the trend period, when survey effort in many areas decreased. The continued expansion of Scottish populations probably means little or no monitoring is ongoing in some areas where the population is growing rapidly. Productivity information is drawn from the majority of the Scottish breeding population, but productivity parameters for unmonitored birds (being on the frontiers of an expanding range) may differ systematically from those of most monitored pairs. Consultation with data contributors has shown that variation in trends between different areas coupled with limited available monitoring effort could lead to a misleading regional trend (e.g.

there are variable population trajectories and monitoring coverage/effort for Red Kites within Angus).

National trends

No trends in breeding numbers or breeding productivity are available for Red Kite at a national level.

SRMS regional trends

Breeding numbers of Red Kite in Highland decreased, while those in Dumfries & Galloway increased. Breeding numbers in Tayside & Fife showed non-linear variation, while those in Central and North East Scotland did not change significantly (Table 1, Figure 2).

Breeding success of Red Kite did not change significantly in Central, Dumfries & Galloway, Highland, North East Scotland and Tayside & Fife (Table 1, Figure 3).

Clutch size, brood size and number of fledglings did not change significantly for North East Scotland (Table 1, Figures 4-6). Number of fledglings decreased in Dumfries & Galloway but did not change significantly in Central, Highland and Tayside & Fife (Table 1, Figure 6).

Trends are not yet available for Lothian & Borders or South Strathclyde.

NHZ regional trends

Breeding numbers of Red Kite increased in NHZ 19, but did not change significantly in NHZs 07, 09, 15 and 16 (Table 2, Figure 7).

Breeding success of Red Kite did not change significantly in NHZs 09, 15, 16, 19 or 21) for which trends could be produced (Table 2, Figure 8).

No trends in clutch size or brood size are available for any region (Table 2). Number of fledglings decreased in NHZ 19 and did not change significantly in the remaining three regions (NHZs 15, 16 and 21) (Table 2, Figure 9).

Trends are not yet available for NHZs 05, 10-12, 17-18 and 20.

Details of contributing records

3,044 (232 to 390 per year, mean: 304 records) from 2009-2018 contributed to this trends analysis (Table 5).

	16. Eastern Lowlands	2009	2018	10	74.9	46.6 (41.5 to 51.7)	Not significant		0.8 (-2.3 to 4.0)
	19. Western Southern Uplands and Inner Solway	2009	2018	10	66.4	60.9 (54.1 to 67.7)	Increase		3.8 (1.0 to 6.8)
Success	09. North East Coastal Plain	2010	2017	8	9.125	0.8 (0.7 to 0.9)	Not significant	Sample sizes small; Variable effort; Expanding population; No home range random effect	0.1 (-4.3 to 3.6)
Success	15. Loch Lomond, The Trossachs and Breadalbane	2009	2018	10	19	0.8 (0.7 to 0.8)	Not significant	Sample sizes small; Variable effort; Expanding population	-1.0 (-3.4 to 1.1)
	16. Eastern Lowlands	2009	2018	10	43.2	0.7 (0.7 to 0.7)	Not significant	Variable effort; Expanding population	-0.3 (-2.1 to 1.4)
	19. Western Southern Uplands and Inner Solway	2009	2018	10	64.4	0.8 (0.8 to 0.8)	Not significant	Variable effort; Expanding population	-0.3 (-1.4 to 0.7)

Parameter	Region	First year of trend	Last year of trend	Number of years	Mean number of home ranges across years	Mean parameter value (and 95% confidence limits)	Trend during the period	Caveats	Estimated % annual change (and 95% confidence limits)
	21. Moray Firth	2009	2018	9	31.444	0.9 (0.8 to 0.9)	Not significant	Variable effort; Expanding population	0.7 (-1.1 to 2.4)
Number of fledglings	15. Loch Lomond, The Trossachs and Breadalbane	2009	2018	10	14.5	2.0 (1.9 to 2.1)	Not significant	Expanding population; Sample sizes small	-0.7 (-4.9 to 3.6)
Number of fledglings	16. Eastern Lowlands	2009	2018	10	29.4	1.9 (1.8 to 2.0)	Not significant	Expanding population; No home range random effect	-0.3 (-3.3 to 2.9)
	19. Western Southern Uplands and Inner Solway	2009	2018	10	52.6	1.6 (1.5 to 1.6)	Decrease	Expanding population; No home range random effect	-5.4 (-7.8 to -2.9)
	21. Moray Firth	2009	2018	8	29.5	2.2 (2.1 to 2.3)	Not significant	Expanding population; No home range random effect	-1.0 (-4.4 to 2.5)

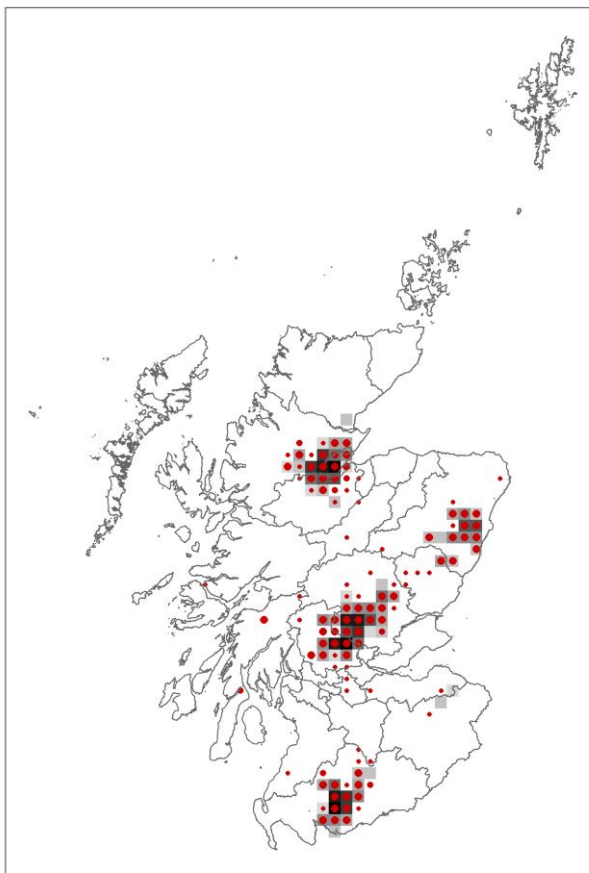

Table 5: Number of Red Kite home range checks for occupancy reported to the SRMS during 2009-2018, in each of the 12 SRMS Regions, with approximate proportion of estimated population monitored. At the bottom of the table, row A is the mean number of home range checks over the most recent five years. Row B gives the estimated proportion of the national population in each region, based on Bird Atlas Timed Tetrad Visit (TTV) data. The depth of red shading indicates the relative importance of each region for this species. If survey effort was spread evenly across the whole population, the ratio of A:B would not vary much between regions.
